

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts in order to help them operate within challenging environmental surroundings. Lift masts are often subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences such as heat, dust, cold, moisture, contamination and aggressive ambient air. Thus, the guidance arrangements of lift masts must be particularly robust and have a particular high load carrying capability.

Carriage rollers have been developed as the solution for functioning in various environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts have to be economical and maintain operational security while having the ability to handle a particularly high load carrying capacity.
